BIS 15L Project Evaluation

Directions: Please fill out the form below. Your responses will be kept confidential. Your candid evaluation of **yourself** and of **your group members** is appreciated.

Please email the completed form to Prof. Ledford (jmledford@ucdavis.edu) by 5:00p on Monday, March 18.

Your name: Eric Du

Group #: 15

Project Title: The Genetic Determinants of Dog Size

1. What are the names of your other group members? Next to each name, please state their primary responsibility.

Catrinel Berevoescu: Leader, organizing, data organizing

Ryan Chu: data analyzing

Jacques Mak: slides, visual

Eric Du: Introduction and conclusion

2. What was your overall experience with the project? Do you feel like it was a valuable learning experience? Were there any problems?

Overall, I felt extremely pressured on time. We got to know the project and group member on week 7, which was the busiest time during the quarter. It was very hard for us to find time to fit all 4 of our schedules to meet. I believe we would've done much better if we could know the project and group member earlier.

3. Did all members of your group contribute evenly? Please explain.

I felt Catrinel did way more work than rest of us. I felt she contributed at least 60% of the work.

4. If you had to give yourself a grade (A-F) on this project, what would your grade be? Please explain.

I would give myself a C. I really wanted to find more data to combine with the current data. But it was quite hard. The genetic raw data, especially dog breed related data, was hard to find. For example, I downloaded a 79GB data for almost 3 hours but eventually found it is useless.

Even though in the end I did found some data about the dog breeds and their related genetic disease caused by breeding, it was unable to combine with our current data. This is also why my exploration data file only have 2 data.

5. Do you have any other questions or concerns?

I really hoped we could've start the project earlier...
